## Python: 1 Course Completed

### Try Python

#### Getting Started With Python

Explore the basics of Python and learn what it means to store and manipulate numbers and words as well as make decisions with your program.

- **Birds & Coconuts**

Get started with Python by calculating how many swallows it takes to carry a coconut.

- **Spam & Strings**

Learn how to store characters in a string to combine, dissect, and slice words.

- **Conditional Rules of Engagement**

Explore conditionals in Python to see how your program can make important decisions.
